Wave sensors: field form

One form per corridor and deployment (7 sensors). Page 1 is filled in at deployment, page 2 at retrieval, and page 3 is the post-site report, filled in after downloading the data. Fill it in with Adobe Acrobat Reader (free): the Survey ID is then filled in automatically and the form is saved correctly. Method: Wave attenuation page of the SEASTRONG Field Processing Tools documentation.

1. Header

Study area (BZ / SC / FJ) Belize, Seychelles or Fiji		**Corridor (C1–C6)** Corridor number in the study area	
Survey ID e.g. BZ140327C1waves (automatic in Acrobat)	will autocompile	**Date** Deployment date, as mm/dd/yyyy	
Deployment (D1 / D2 / D3) First, second or third deployment in this corridor		**Operators** Names of the people deploying	
Sensor clocks set to UTC (Y / N) All sensor clocks set to UTC before deployment		**Barometric logger running (Y / N)** Barometric reference logging in air at the base	
Barometric logger ID Serial number or label		**Tide at deployment** Rising, falling, high or low	
Sea state Calm, moderate or rough			

2. Deployment

Start: time logging started (UTC). **Depth**: water depth at the sensor and the time it was measured. **Port**: height of the pressure port above the bottom. **Fixing**: block, substrate, stake, weight or root. **Photo**: photo number of the mounted sensor. **T / S**: water temperature (°C) and salinity, if measured.

Position	Sensor ID	Start (UTC)	Depth (m)	at (UTC)	Port (cm)	Fixing	Photo	T / S
e.g.	*PT2X-0412*	*09:40*	*1.8*	*09:52*	*5*	*block*	*0123*	*28.5 / 35*
Reef S1 (0 m)								
Reef S2 (30 m)								
Reef PC (post-crest)								
Seagrass S1 (0 m)								
Seagrass S2 (30 m)								
Mangrove S1 (0 m)								
Mangrove S2 (30 m)								

3. Retrieval

Retrieved by Names of the people retrieving			

PT2X are retrieved after 2 days, Driesen + Kern after 4 days. **Date**: retrieval date (mm/dd). **End**: time logging stopped (UTC). **Data file**: survey ID + habitat + position, e.g. BZ140327C1waves_reef_S1. **OK**: sensor in place, not moved or buried (Y / N).

Position	Date	End (UTC)	Depth (m)	at (UTC)	Data file	OK	Notes
Reef S1 (0 m)							
Reef S2 (30 m)							
Reef PC (post-crest)							
Seagrass S1 (0 m)							
Seagrass S2 (30 m)							
Mangrove S1 (0 m)							
Mangrove S2 (30 m)							

Post-site report

Filled in after the retrieval and download. Send it with the data to the data manager.

A. Deployment

Survey ID e.g. BZ140327C1waves (automatic in Acrobat)	will autocompile	**Date** Deployment date, as mm/dd/yyyy	
Filled in by Who fills in this report		**All sensors recovered (Y / N)** All 7 sensors retrieved	
Data downloaded (Y / N) All records downloaded and checked		**Barometric data downloaded (Y / N)** Barometric record covering the deployment	
Data folder name Survey ID, e.g. BZ140327C1waves			

Data download link Link to the shared folder with all data, photos and this form	

B. Quality check (tick if a problem)

- ☐ A sensor moved, tilted or was found loose
- ☐ Pressure port buried, fouled or covered
- ☐ Battery or memory ran out before retrieval
- ☐ Sensor clock not on UTC or time unclear
- ☐ Barometric record missing or with gaps
- ☐ Depth at deployment or retrieval not measured

C. Deviations from the protocol, problems and notes
